Claims

- Method for creating a saliency map of an image characterized in that it
 comprises the steps of :
 - Projection (E1) of said image according to the luminance (A) component and if said image is a color image, according to the luminance (A) component and according to the chrominance components (Cr1, Cr2),
 - Perceptual sub-bands decomposition (E3, T2, T'2, T"2) of said components (A, Cr1, Cr2) according to the visibility threshold of a human eye,
 - Extraction (E7) of the salient elements of the sub-bands related to the luminance (A) component,
 - Contour enhancement (E8, T7) of said salient elements in each sub-band related to the luminance (A) component,
 - Calculation (T7) of a saliency map from the contour enhancement, for each sub-band related to the luminance (A) component.
 - Creation (T8) of the saliency map as a function of the saliency maps obtained for each sub-band.
 - 2. Method according to claim 1 characterized in that it comprises, further to the perceptual sub-bands decomposition,
 - a step of achromatic contrast sensitivity function (CSF) for the luminance (A) component and if said image is a color image,
 - a step of chromatic sensitivity function for the chromatic components (Cr1, Cr2).
- 30 3. Method according to claim 2 characterized in that it comprises a step (E6, T4, T'4, T"4) of visual masking, further to the step of contrast sensitivity function, for each sub-band of the luminance (A) component and of the chromatic (Cr1, Cr2) components.

WO 2005/059832 PCT/EP2004/053471

- 4. Method according to claim 3 characterized in that, when said image is a color image, it comprises a step (T5) of chromatic reinforcement of the luminance (A) sub-bands.
- 5 5. Method according to any of the preceding claims characterized in that the perceptual sub-bands decomposition is obtained by carving-up the frequency domain both in spatial radial frequency and orientation.
- 6. Method according to claim 5 characterized in that the perceptual decomposition of the luminance (A) component leads to 17 psycho visual subbands distributed on four crowns.
 - 7. Method according to claim 5 or 6 characterized in that the perceptual decomposition of the chromatic components (Cr1, Cr2) leads to 5 psycho visual sub-bands distributed on two crowns for each chromatic component (Cr1, Cr2).

30

- 8. Method according to claims 4 to 7 characterized in that the chromatic reinforcement of the luminance (A) component is done on the sub-bands of the second crown and based on the sub-bands of the first crown of the chromatic components (Cr1, Cr2).
- 9. Device for creating a saliency map of an image characterized in that it comprises means for:
 - Projecting said image according to the luminance (A) component and if said image is a color image, according to the luminance (A) component and according to the chrominance components (Cr1, Cr2),
 - Transposing into the frequential domains said luminance and chrominance signals,
 - Decomposing into perceptual sub-bands said components of the frequential domain according to the visibility threshold of a human eye,

WO 2005/059832 PCT/EP2004/053471

5

10

- Extracting the salient elements of the sub-bands related to the luminance component,

- Contour enhancing said salient elements in each sub-band related to the luminance component,
- Calculating a saliency map from the contour enhancement, for each sub-band related to the luminance component.
- Creating the saliency map as a function of the saliency maps obtained for each sub-band.
